

# Seaplane, Skiplane, and Float/Ski-Equipped Helicopter Operations Handbook: FAA-H-8083-23 (FAA Handbooks series)

This operational handbook introduces the basic skills necessary for piloting seaplanes, skiplanes, and helicopters equipped with floats or skis. It is primarily intended to assist pilots who already hold private or commercial certificates and who are learning to fly these aircraft types. It is also beneficial to rated seaplane pilots who wish to improve their proficiency, pilots preparing for flights using ski-equipped aircraft, and flight instructors engaged in the instruction of both students and transitioning pilots. The book introduces the future seaplane or skiplane pilot to the realm of water operations and cold weather operations, and provides information on the performance of procedures required for the addition of a sea class rating in airplanes. Previously published in the Airplane Flying Handbook (FAA-H-8083-3), this information has since been removed from that text (with the introduction of the FAA-H-8083-3A). The Seaplane, Skiplane, and Float/Ski Equipped Helicopter Operations Handbook features full-color illustrations and photographs throughout, as well as straightforward discussions and explanations for:--Rules, regulations and aids for navigation--Principles of seaplanes--Water characteristics and seaplane base operations--Seaplane operations (preflight, takeoffs, landings)--Performance--Skiplane operations--Emergency open sea operations--Float and ski equipped helicopters
